

CHEMISTRY

Tips for Studying Chemistry

- Visit Khan Academy for a range of Chemistry videos!
- Constantly practice problems based on the same concept to better grasp how to work through different problems. In other words, repeat each concept over and over again!
- Create a sheet of various formulas so that you can easily reference it, if needed.
- For topics such as, "*Trends in the Periodic Table*", create a separate sheet for those trends. Take at least 10 minutes each morning to review that sheet!
- Create a document for each chapter that contains the main points of that chapter.
